

FOR IMMEDIATE RELEASE

PS|SHIP™ ANNOUNCES THE LAUNCH OF PS|RECEIVER™ FOR INBOUND PARCEL TRACKING

The add-on module provides full tracking for all inbound and intra-office shipments

Albany, CA — September 11, 2008 — PS|Ship™, a division of Lynch Marks, LLC and the leading provider of shipping automation tools for professional services organizations, including more than 65 of the Am Law 200 firms, today announced the launch of **PS|Receiver™**. This add-on module provides existing PS|Ship clients with the ability to fully track and have a complete chain-of-custody for all inbound and intra-office shipments during their transit throughout the firm.

PS|Receiver fully utilizes existing PS|Ship technology and workflows. Integrating existing hardware, security and data, firm wide shipping efficiency is enhanced while ongoing system costs are minimized. Implementation costs are also reduced by using off-the-shelf hardware and industry standard protocols, eliminating need to purchase expensive equipment to capture signature and other delivery data. Combined with minimal installation and training time, the addition of PS|Receiver drives an immediate return on investment.

“The PS|Receiver module is the natural extension to our established shipping platform and provides a complete solution for shipping and tracking both inbound and outbound packages,” stated Peter Marks, founder and CEO of Lynch Marks, LLC / PS|Ship. “We are pleased to announce this additional offering, knowing that it will greatly enhance our clients’ ability to manage shipments in their office environments across the country.”

Key features of the PS|Receiver module include:

- Shared hardware and security set-up with existing PS|Ship modules, eliminating the need to invest in additional server equipment, set-up time or system management.
- Shared data with existing PS|Ship modules, eradicating the need for additional data feeds and data management.
- Intelligent data capture / recognition to dramatically reduce package check-in time.
- Complete chain-of-custody and full visibility of the delivery cycle from mailroom receipt to recipient signature.
- Integration with existing PS|Ship “history” to allow end-user (receiver) visibility into the status and location of all inbound as well as outbound shipments.

About PS|Ship

PS|Ship™ is a product of Lynch Marks, LLC, a leader in providing technology solutions and consulting to the professional services industry. The PS|Ship application suite (Label Server, EDI/Invoice Server, and Receiver) streamlines the entire shipping and receiving process. By integrating with the global providers, including FedEx, UPS, and DHL, as well as local couriers, PS|Ship saves time and money with greater accountability.
